Product Information

What is an Access template?

What is an Access template?

An MS-Access template is a file that, when opened, creates a complete database application. The database is ready to use, and contains all the tables, forms, reports, queries, macros, and relationships that you need to start working. Because the templates are designed to be complete end-to-end database solutions, they save you time and effort and enable you to start using your database right away. After creating a database by using a template, you can customize the database to better suit your needs, just as if you had built the database from scratch and get Antrow to Migration it to a Web App.

Each template is designed to meet specific data management needs and you can either use one of the templates included with Access or find one online.
